

Lycopene

L-O-M®

Multi-Carotenoids LYCOPENE AND MULTI CAROTENIDS

What is L-O-M?

L-O-M stands for longevity, oasis and magic, and contains a multitude of bioactive phytonutrients including Lycopene, Phytoene, Phytofluene, β -Carotene, tocopherols, and phytosterols. This synergistic combination provides many health benefits to the human body, most notably cancer prevention.

The Lycopene is extracted from unique, GMO-free, red ripe, specially bred and cultivated Lycopene rich tomatoes (known as LRT), the only variety in the world containing 4-6 times more lycopene than regular tomatoes sold in the market. Due to its highly bioavailable content, an acute dose is only two capsules per day. For mild symptoms, the patient only needs one capsule per day. The preventive dose is one capsule every other day.

This product differs from other lycopene products in that it contains no synthetic lycopene, and is in a synergistic blend that is necessary for optimal results. This "Multi-Carotenoid" form has been tested and proven in research to be essential for cancer protection and antioxidant activity.

An extensive compilation of scientific abstracts can be found at www.lycopene.org.
