After Sun Spray

Hydrates and nourishes the skin after time in the sun.

TARGET MARKET:

Consumers that are looking for an After Sun Spray that moisturizes & revitalizes the skin.

The soothing Hyaluronic Acid and Peppermint Oil in our After Sun[®] Spray helps to moisturize and soothe sun-drenched skin. This spray can be used after time in the sun or anytime you want to hydrate your skin.

Directions:

Shake well before use.
Safe for use on body and face.
Avoid eyes. Discontinue use if irritation occurs.

Ingredients:

Water, Sodium Hyaluronate (Hyaluronic Acid), Zinc Citrate, Peppermint Oil.

Hyaluronic Acid (HA) is a natural element and vital component of a healthy skin. The After Sun Spray nourishes and hydrates to promote healthy looking skin. HA has the unique ability to bind up to 1,000 times its weight in water. The body's natural HA production decreases with age leaving the skin without proper hydration.

Peppermint Oil is a member of the mint family, a large group of plants that have been used for thousands of years for their beneficial properties in commercial products like toothpaste and skincare. Menthol, a major constituent of peppermint oil, is commonly used in skin care for its calming and soothing properties to the skin.
